

Road Bikes

The first Bamboosero model to be raced, this bike is designed around classic European road racing geometry. The bamboo absorbs vibration exceptionally well and is suitable for the roughest of roads. The frame is designed to be plenty stiff for the average sized rider of a given frame size. The wide range of sizes offered allows you to get one that fits perfectly. They come with horizontal dropouts for converting to singlespeed or internally geared hub use. In addition to a short reach caliper brake bridge, a disc brake mount is available and can accept racks and fenders for touring.

Frames weigh from 3 to 5 pounds, depending on the size.

Bamboo Road Frame Geometry									
Size	Top Tube Length	Seat Tube Angle	Set Back	Chainstay Length	Stand Over Height	B.B. Drop	Head Tube Angle	Head Tube Length	Wheel Base
46	50	75	11.9	41.5	71.5	7	72	9.1	95.5
